

# TM AMICAL

## FUNGICIDAL WALL PAINT FOR HUMID ROOMS

This water-resistant acrylic dispersion, which provides excellent coverage, is highly effective in preventing the development of black and red wall mould, as well as the growth of algae in humid production and storage rooms. It is particularly appropriate for use in breweries, beer cellars, malthouses, wine cellars, dairies, and food processing areas due to its non-toxic biocide.

### APPLICATION

TM AMICAL® can be applied by means of a roller, brush or spray gun. Apply two layers of paint, to promote the micro-biocidal effect. This prevents the mould from growing in the wall, and prevents new surface-led infections. Dilute the first coat down with approx. 20% water (5:1). In order to obtain a consistent surface, the second coat should be applied by means of a medium roller with approximately 5% water (20:1).

Strongly absorbent or rough surfaces should be treated with AMICAL primer first. The average consumption based on two coats, is about 300g/m<sup>2</sup> for smooth surfaces, and 400 -450g/m<sup>2</sup> for rough ones. Clean the tools with water immediately after use.

PRE-TREATMENT: Before applying the paint, remove loose paint and destroy any current surface mould using a chlorine-based solution

### TECHNICAL FACTS AND ADVANTAGES

- User-friendly, easy to apply
- Non-toxic
- Breathable
- Good coverage (always use two layers)
- Water resistant - biocide does not wash out, ensuring long-lasting effect
- Tested by the Austrian Lacquer Institute, Vienna 3,13006 (D7), in accordance with the quality prescription grade II, interior dispersion paints
- Tested worldwide.
- Available in 5kg and 15kg containers
- Shelf life 2 years

MARKING ACCORDING TO THE CHEMICAL LAW: No safety marking necessary. For more information, please refer to the safety data sheet

*TM AMICAL® guarantees the best and a long-lasting protection against all species of wall mould and algae*
